

PHILIP MIRON

Lake Forest, IL | 847-313-1927 | mironp@lakeforest.edu | linkedin.com/in/philip-miron | Authorized to work in the U.S. without sponsorship

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, Scikit-Learn, Matplotlib), SQL, Java, C#, PHP, JavaScript, HTML5, CSS3, AJAX
Tools & Cloud: Power BI, AWS (S3, EC2), ETL Pipelines, Relational Databases, Database Design, Advanced Excel
Methodologies: Exploratory Data Analysis (EDA), Predictive Modeling, Feature Engineering, Regression Analysis
Languages: Romanian (Fluent), Spanish (Conversational)

EDUCATION

LAKE FOREST COLLEGE

Bachelor of Arts in Computer Science (GPA: 3.3/4.0)

Relevant Coursework: Data Structures, Databases, Object-Oriented Programming, Web Development

Honors & Awards: Presidential Scholarship, Forester Flagship Program Recipient

Lake Forest, IL

Graduation: May 2026

DATA SCIENCE & ANALYTICS PROJECTS

Truck Fleet Maintenance Analytics Dashboard

Python | SQL | Power BI

- Developed an end-to-end maintenance analytics dashboard using a structured fleet dataset to evaluate repair costs, downtime, failure patterns, technician workload, and vehicle performance.
- Used Python and SQL to clean, transform, and aggregate maintenance records, then built Power BI visualizations and KPIs to identify high-cost components, repeat failures, and operational bottlenecks.

Food Manufacturing Business Intelligence System

Python | SQL | Power BI

- Designed a synthetic food-manufacturing dataset modeled around real production operations, including products, machines, employees, production orders, inventory, downtime events, and quality inspections.
- Built a relational data model and Power BI dashboard to analyze production output, inventory levels, machine downtime, quality results, and order performance, demonstrating how operational data can support manufacturing decisions.

Automotive Parts Inventory & Predictive Maintenance System

Python | SQL | Analytics

- Built a predictive analytics model using historical fleet maintenance data to forecast part failures and support asset uptime and maintenance planning.
- Wrote SQL queries to analyze inventory turnover, identify parts bottlenecks, and calculate reorder thresholds; used Python to prepare and visualize maintenance and lifecycle-cost data.

Full-Stack Movie Review Platform

SQL | PHP | JavaScript | AJAX

- Collaborated in an agile team to design and normalize a relational SQL database for user profiles, reviews, and movie metadata.
- Implemented PHP server-side functionality for authentication, session management, and database-driven application workflows.

PROFESSIONAL EXPERIENCE

OZZY TRUCK REPAIR

Data-Driven Operations Manager

August 2021 – August 2022

Chicago, IL

- Managed structured databases tracking component lifespans, parts inventory, vendor pricing, and service-order information across hundreds of repairs.
- Analyzed historical repair turnaround data to reorganize technician schedules, reducing asset downtime by 15%.
- Audited billing and customer records to maintain database integrity and identify customer retention trends.

ID TECH

Computer Science Instructor (Remote)

May 2025 – August 2025

Silicon Valley, CA (HQ)

- Taught Java, Python, and object-oriented programming to students ages 10–17 through structured, project-based lessons.
- Analyzed student performance metrics to adapt instruction and improve project completion and engagement.
